1. Pendahuluan

Pengelolaan inventaris merupakan hal penting dalam mendukung operasional yang efisien dan transparan pada sebuah organisasi, contohnya pada lembaga keuangan seperti Bank Perkreditan Rakyat (BPR). Namun, salah satu BPR yaitu BPR Lestari belum memiliki sistem pengelolaan inventaris. Proses pendataan aset dilakukan secara manual, yang dapat menimbulkan sejumlah permasalahan, seperti kehilangan data, ketidaktepatan dalam pelacakan aset, dan kesulitan dalam proses audit.

Ketiadaan sistem pengelolaan inventaris yang terkomputerisasi dapat berdampak pada operasional BPR, di mana aset-aset penting yang menunjang kelancaran kegiatan bisnis tidak tercatat dengan baik. Hal ini berpotensi menimbulkan inefisiensi dan risiko kehilangan atau kerusakan aset yang tidak segera terdeteksi. Oleh karena itu, diperlukan suatu solusi yang mampu mengotomatisasi proses pendataan dan pelacakan inventaris secara lebih efektif dan terstruktur.

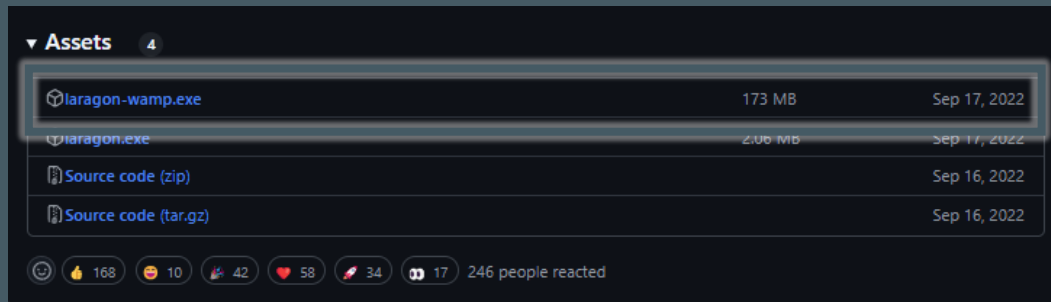

Sebuah sistem pengelolaan inventaris dikembangkan sebagai solusi untuk pengelolaan inventaris dan aset dari BPR. Sistem dilengkapi dengan fitur manajemen inventaris, manajemen pemindahan inventaris, pelaporan inventaris dan pemindahan inventaris, pembuatan kode QR inventaris, dan lain-lain. Sistem ini diharapkan mampu menggantikan metode manual yang selama ini digunakan, dengan menyediakan platform berbasis digital yang memfasilitasi pendataan, pemantauan, dan pelaporan aset secara lebih efisien.
